Achievement Relocked Geoffrey Engelstein, 2020-02-18 How game designers can use the psychological phenomenon of loss aversion to shape player experience. Getting something makes you feel good, and losing something makes you feel bad. But losing something makes you feel worse than getting the same thing makes you feel good. So finding \$10 is a thrill; losing \$10 is a tragedy. On an “intensity of feeling” scale, loss is more intense than gain. This is the core psychological concept of loss aversion, and in this book game creator Geoffrey Engelstein explains, with examples from both tabletop and video games, how it can be a tool in game design. Loss aversion is a profound aspect of human psychology, and directly relevant to game design; it is a tool the game designer can use to elicit particular emotions in players. Engelstein connects the psychology of loss aversion to a range of phenomena related to games, exploring, for example, the endowment effect—why, when an object is ours, it gains value over an equivalent object that is not ours—as seen in the Weighted Companion Cube in the game Portal; the framing of gains and losses to manipulate player emotions; Deal or No Deal's use of the utility theory; and regret and competence as motivations, seen in the context of legacy games. Finally, Engelstein examines the approach to

loss aversion in three games by Uwe Rosenberg, charting the designer's increasing mastery.

The Joy of Science Richard A. Lockshin, 2007-11-05 Scientists have great passion. What could be more exhilarating than to go to work every day feeling as if you were once again a nine-year-old called up to the stage to help the magician with his trick? To be a researcher is to always be in the position of having the chance to see how the trick works. No wonder that many researchers feel that each new day is the most exciting day to be a scientist. It therefore is not surprising that scientists have such trouble communicating with non-scientists. It is difficult for the scientist to understand a life not focused on the desire to understand. But the differences are not that. Everyone wants to understand; that is one of the factors that make us human. The difference is more that scientists limit their definition of comprehension to specific rules of logic and evidence. These rules apply and are used in everyday life, but often with less rigor or restrictions on evidence.

The One Behind the Psychologist Courtland O.k. Smith, 2013-12-29 New York City psychologist Dr. Nicholas Thesiger has lost his wife, his private practice, and all remnants of his former privileged life. Now he is looking back, parsing the layers of lies and deceit, and reliving the time leading up to his incarceration as he struggles to understand what went wrong, how he went wrong. But years of assuming different personalities to aid his patients' therapy, a technique he picked up in graduate school, has left him unsure of what is real and what is construct. Step inside the doctor's life, inside his home, inside his office, inside his head and find out what is behind the psychologist. - First in the Behind the Psychologist Trilogy - - The One Behind the Psychologist - - The Two Behind the Psychologist - - The Three Behind the Psychologist -

Light Science Thomas D. Rossing, Christopher J. Chiaverina, 2020-01-03 Intended for students in the visual arts and for others with an interest in art, but with no prior knowledge of physics, this book presents the science behind what and how we see. The approach emphasises phenomena rather than mathematical theories and the joy of discovery rather than the drudgery of derivations. The text includes numerous problems, and suggestions for simple experiments, and also considers

such questions as why the sky is blue, how mirrors and prisms affect the colour of light, how compact disks work, and what visual illusions can tell us about the nature of perception. It goes on to discuss such topics as the optics of the eye and camera, the different sources of light, photography and holography, colour in printing and painting, as well as computer imaging and processing.

Paper Knowledge Lisa Gitelman, 2014-03-28 Paper Knowledge is a remarkable book about the mundane: the library card, the promissory note, the movie ticket, the PDF (Portable Document Format). It is a media history of the document. Drawing examples from the 1870s, the 1930s, the 1960s, and today, Lisa Gitelman thinks across the media that the document form has come to inhabit over the last 150 years, including letterpress printing, typing and carbon paper, mimeograph, microfilm, offset printing, photocopying, and scanning. Whether examining late nineteenth century commercial, or job printing, or the Xerox machine and the role of reproduction in our understanding of the document, Gitelman reveals a keen eye for vernacular uses of technology. She tells nuanced, anecdote-filled stories of the waning of old technologies and the emergence of new. Along the way, she discusses documentary matters such as the relation between twentieth-century technological innovation and the management of paper, and the interdependence of computer programming and documentation. Paper Knowledge is destined to set a new agenda for media studies.
